ACCEPTABLE RISK LEVEL

Example: Italian Framework

EXAMPLES: PAI RULES

HAZARD		
P3 - HIGH	P2 - MEDIUM	P1 - LOW
Tr = 50 anni h > 1 m	Tr = 50 anni 1 m > h > 0	Tr = 100 anni h > 0 m

	VULNERABILITY		
	ELEMENTI AREALI	ELEMENTI LINEARI	ELEMENTI PUNTFORMI
Elevata	ZTO A ZTO B ZTO C	Viabilità principale Viabilità ferroviaria	Edifici Pubblici Caseggi Strutture ospedaliere Discariche... Industrie a rischio
Media	ZTO D	Viabilità ordinaria	Beni storici, artistici, architettonici, geologici
Moderata	ZTO E Aree attrezzate di interesse comune (sport e tempo libero, parcheggi, ecc.)	/	/

RISCHIO IDRAULICO		PERICOLOSITÀ			
		Tr = 50 anni h > 1 m	Tr = 50 anni 1 m > h > 0	Tr = 100 anni 1 m > h > 0	
VULNERABILITÀ	ZTO A-B-C, Viabilità principale, Linee ferroviarie, Servizi a rete, Edifici Pubblici, Caseggi, Edifici scolastici	V3	R3	R3	R2
	ZTOD, Beni artistici e architettonici	V2	R3	R2	R2
	ZTOE Aree attrezzate di interesse comune, Vincolo ambientale	V1	R2	R1	R1

... to be revisited
(2007/60/CE, DLGS 49/2010)

MEASURES ALREADY IMPLEMENTED?

Inspection and prioritization of existing
measures (Juliette)

Risk Analysis Risk Reduction Zar Chi Aye

Layers Panel

- Add/Remove layers
- Layer properties

Status of protection works

1. Define structure
2. Weighting of criteria
3. Assign decision rules
4. Evaluate structure

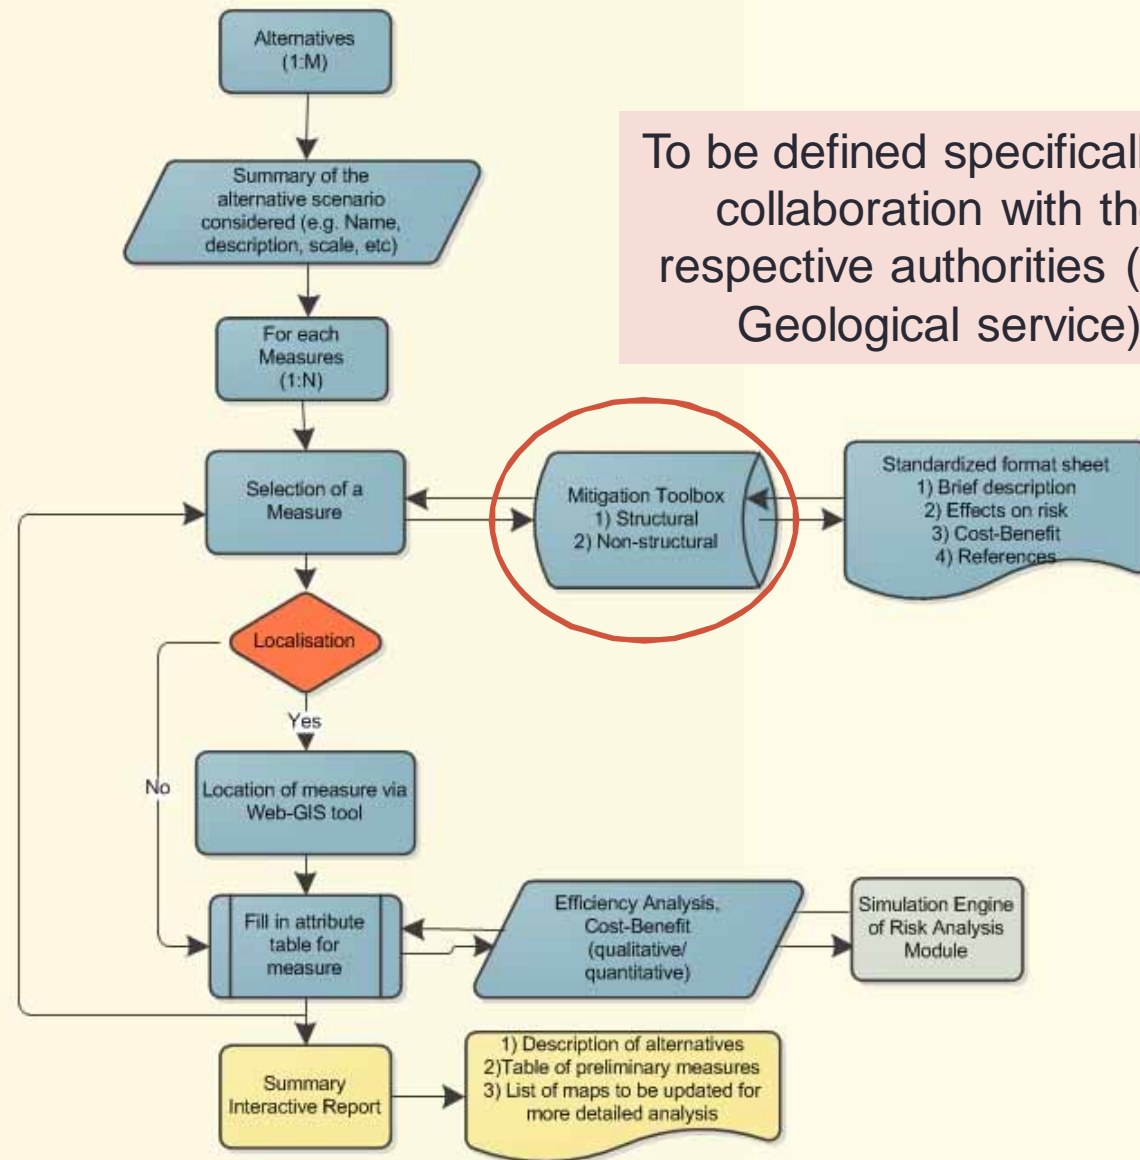

ing tools Search tool Feature Info

Overview of criteria Define subcriteria Inspection form

Select structure:

Criteria	Subcriteria
A) Condition of the structure	A1) Is the flow passing through the spillway?
	A2) What is the status of the check dam?
	A3) How visible is the basis of the structure?
	A4) Is there any protection for scouring at the downstream bottom of the check dam?
B)

1) FORMULATION OF MEASURES

To be defined specifically in collaboration with the respective authorities (e.g. Geological service)

by expert user – e.g. geological services

Decision support system in risk reduction

Alternative Definition Module
Open New Save Save As Print
Name of alternative scenario: Alternative 1
Description of alternative scenario: To analyze the possible options mainly for reduction in hazards.

Legend

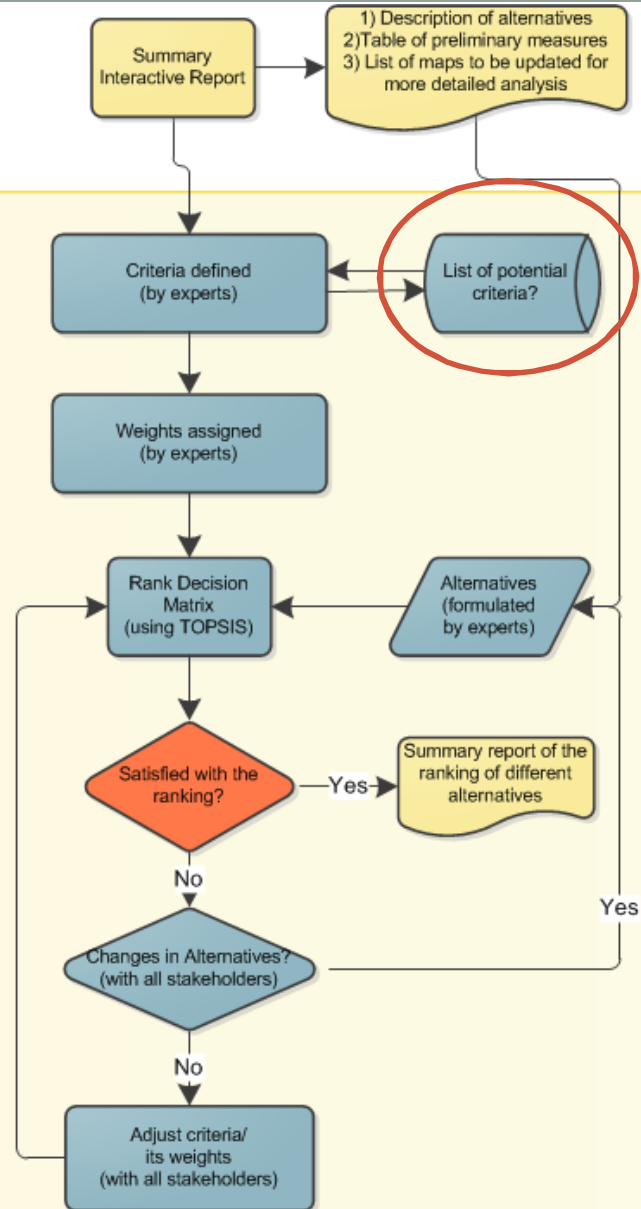

Localization of measures via web-GIS interface

- Preliminary design
- Quantitative cost and benefit (with RA simulation Engine)
- Qualitative cost and benefit (expert judgment/estimation)
- Summary report

2) SELECTION OF MEASURES

Collaborative Platform using TOPSIS
(Multi-Criteria Evaluation method)

Step 4.2. Ranking of alternatives

- Social
- Economic
- Environmental

*If there are multiple decision makers, they should agree on the list of final criteria chosen to validate against the alternatives in the decision matrix

Stakeholders (users of the system)*

- Low-level DMs (Experts)
 - Geological Survey
 - Forestry Services
 - Environmentalists
- High-level DMs
 - Regional Civil Protection
 - FVG Basin Authority
 - High Adriatic River Basin Authority Venezia
- Public
 - Major of Municipality
 - Local voluntary fire brigades
 - Local committee for safety
 - Representative of local residents

* Differs according to the case study area

User: Low-level Expert

TOPSIS method (Hwang & Yoon, 1981)

- Inputs (a mixture of qualitative/quantitative possible)
 - Agree upon the chosen criteria
 - Collect different weights for criteria
 - Fill in the decision matrix (Alternatives Vs Criteria)
- Convert qualitative terms into numbers using fuzzy sets
- Normalization of the decision matrix
- Weighted normalization of the decision matrix
- Choose Positive Ideal Solution (PIS) and Negative Ideal Solution (NIS)
- Calculate Euclidean distance
- Rank the alternatives using relative closeness
 - All involved stakeholders in decision making process
 - Only the low-level users (expert – Geological service)

Example: Decision Matrix

Criteria	Economic		Social		Environmental
	Project Cost	Maintenance Cost	Local Culture	Local Agreement	Land disruption
Alternatives					
Defense structures	2	2	8	3	2
Relocation	2	9	2	1	8
Early warning + stabilization works	5	4	7	7	5
Planning regulations	9	9	8	5	8
Weights (of High-level authority)	4	3	5	1	2

Criteria	Economic		Social		Environmental		
Alternatives	Project Cost	Maintenance Cost	Local Culture	Local Agreement	Land disruption		
Defense structures	(S+	S-	Closeness C*	Ranking	07252441	
Relocation	(Defense structures	0.14958115	0.095031	0.388497823	3	49093445
Early warning + stabilization works	(Relocation	0.15934126	0.079434	0.332673437	4	27894003
	(EW+stabilization works	0.08586669	0.105461	0.551206348	2	
Planning regulations	(Planning regulations	0.00922432	0.17691	0.950442721	1	49093445
Weights (of a High-level authority)	0.266666667	0.2	0.333333333	0.066666667	0.133333333		
Best Value (V+)	0.146031746	0.078632479	0.111111111	0.030188679	0.049093445		
Worst Value (V-)	0.020634921	0.011111111	0.016414141	0.003773585	0.007252441		

* Ranking of alternatives could be different according to the different weights of stakeholders

Participatory decision making

Alternatives

Decision matrix

Criteria	Economic		Social		Environmental
Alternatives	Popul Cost	Maintenance Cost	Local Culture	Local Agreement	Land Disruption
Defense structures	2	2	8	3	2
Relocation	2	9	2	1	8
Early warning + substitution works	5	4	7	7	5
Planning regulations	9	8	8	5	8
Weights (of High-level authority)	4	3	5	1	2

- Iterative process to reach the agreed weights on the criteria to produce only a single ranking matrix?
- Using collaborative platform
 - Provide communication facilities to send mail, vote and provide feedback on the criteria, alternatives and ranking

Follow-up activities

- Case study (Flood plain area) and stakeholders' engagement with Alert Solutions
- Design of Questionnaires/interviews for decision matrix (Alternatives-Criteria)
- Draft prototype at Dec 2013
- First version till end of Aug 2014
- Two workshops (User evaluation)
 - May 2014
 - September 2014
