PROTEZIONE CIVILE

Order
PCM 3309/2003
The importance of the hydrogeological
instability

Survey of the hydrogeological instability

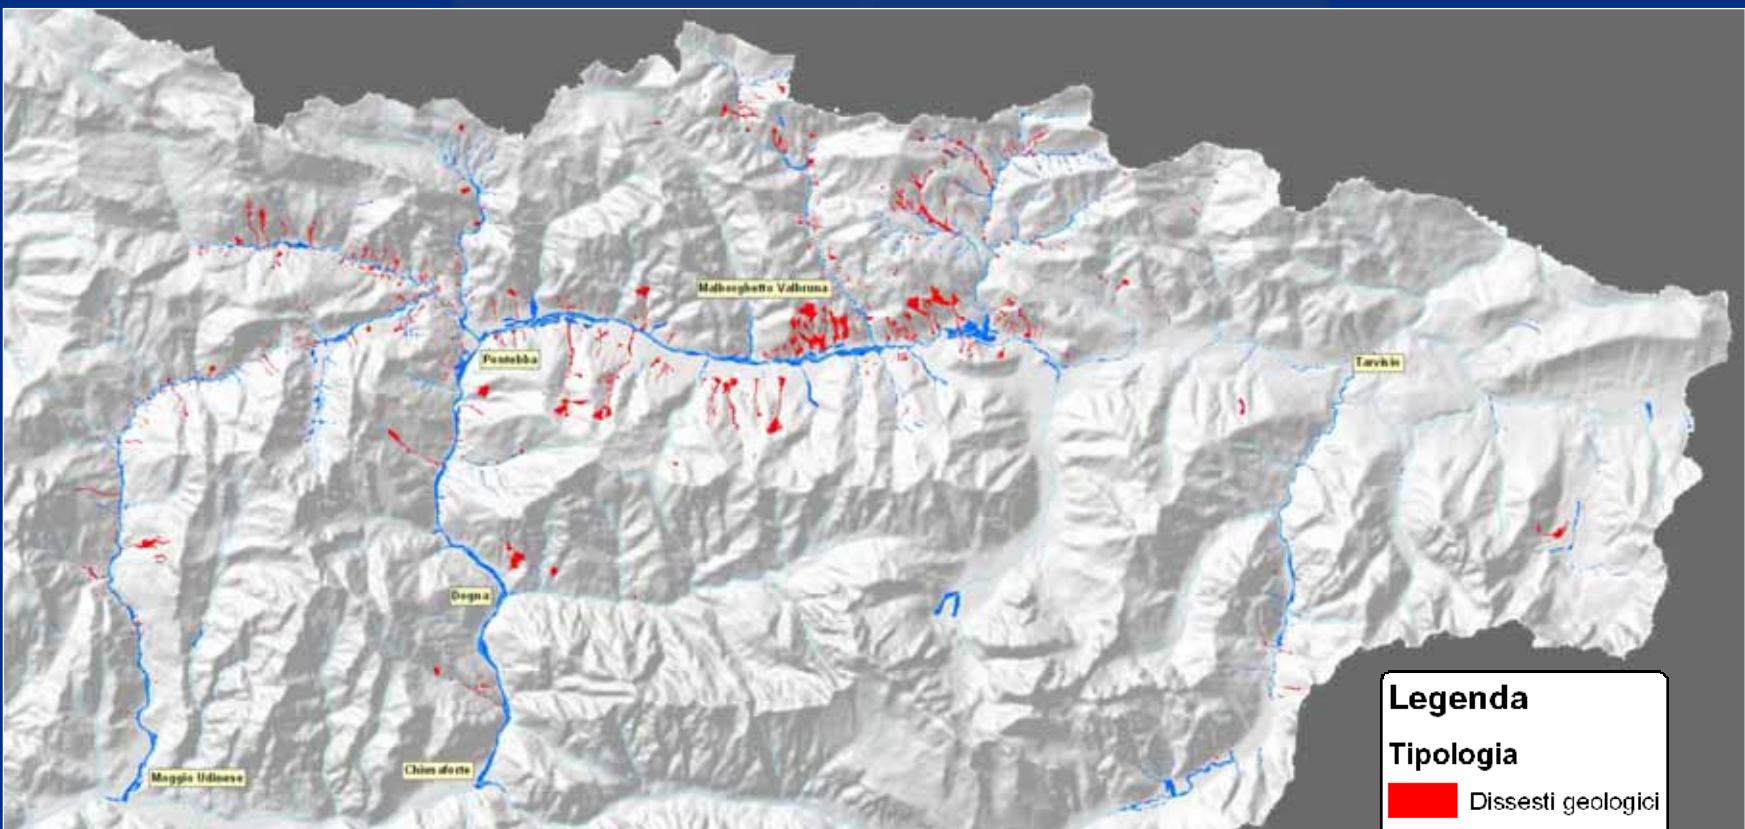

- Team of technicians:
 - Civil protection of the region
(Protezione Civile della Regione)
 - Regional department of the environment and public works
(Direzione Regionale dell'Ambiente e dei Lavori Pubblici)
 - Regional head of the agricultural, natural and forestry resources
(Direzione Regionale delle Risorse Agricole, Naturali e Forestali)
 - Basin authority of the Northern Adriatic region
(Autorità di Bacino dell'Alto Adriatico)
 - CNR-IRPI
 - Department of geological science, environmental and marine from the University of Trieste
(Dipartimento di Scienze Geologiche, Ambientali e Marine dell'Università di Trieste)
- On the basis of:
 - LASER scan surveys by helicopter
 - High-resolution ortophotos (15 cm)
 - Field survey campaign
- The survey for hydrogeological instability was after the alluvial flood event of August 29th 2003 based on which a GIS of hydraulic and geological instability was created. These are basic elements for the protection of the territory and the population

Hydrogeological events

- Flood 29 agosto 2003
 - Map of events

- Survey of geological and hydraulic failures for over 17 km²
- 1108 events of landslides, over a total of 6 km²

Order from the president of the Council of Ministers n°3309 del 11/9/2003

Perimeter of the area in hydrogeological risk Main hydraulic issues identified

Malborghetto:

Hydraulic failure in the sector next to the central pumping station SNAM

Santa Caterina Viadotti SS 13:

Possible overflow into the productive infrastructure

Santa Caterina Confluenza Fella-Rio Bianco:

Residential building and floodplain prone to be flood

San Leopoldo sponda destra:

Possible flood into the town

Pontebba at the upstream confluence with the Ucelli river:

Possible flooding and damage over the train way Udine–Tarvisio

Pontebba capoluogo:

Hydraulic failure from the sector of palaghiaccio e ex caserme

Pietratagliata:

Erosion in the slope at the basement level of the landslide

Dogna:

Possible inundation into the town

Moggio Udinese in the confluence Fella – Aupa:

Possible overflow into the industrial area

REGIONE AUTONOMA FRIULI VENEZIA GIULIA
PROTEZIONE CIVILE

Order PCM 3309/03 Preparation and prevention activities

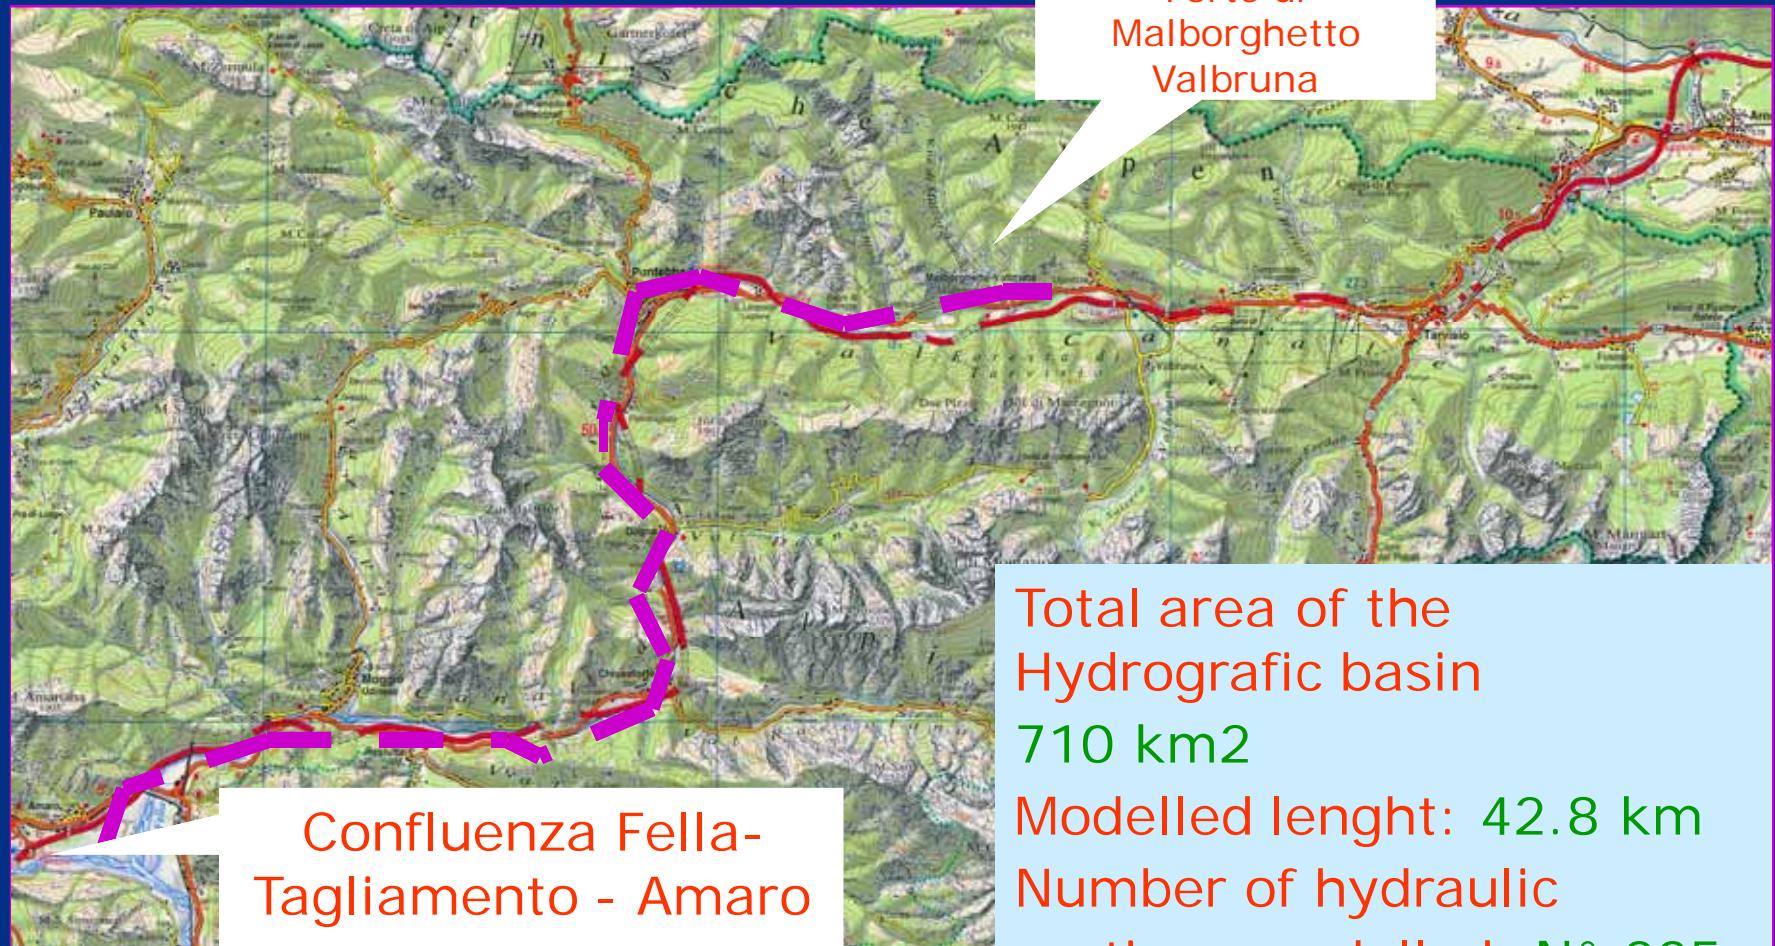

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

FIRST STUDY FOR THE RESTORATION OF THE TERRITORY

Hydraulic analysis of the Fella river for the
planification and the intervention strategy
aimed to the reduction of the flood risk

Hydraulic analysis of the Fella river for the planning of interventions to reduce the risk for flooding

Order from the President of the Council of ministers n°3309 del 11/9/2003 Hydraulic analysis of the Fella river for the planning of interventions to reduce the risk of flooding

- Conceptual approach of the study:
 - Adequation of the morphology of the river channel
 - Hydrological analysis of the hydrographic catchment from the Fella river
 - Implementation of a numerical model for the conceptual hydraulic simulation
 - Numerical simulation for the wave propagation in the full section
 - Data analysis and identification from the hydraulic hazard
 - Elaboration of a conceptual proposal for the reduction of hydraulic hazard using the appropriate criteria
 - Comparison of the hydraulic modelling according to the state of the project
 - Representation of the project proposal
 - Final consideration of the residual risk

Order from the President of the Minister Council n°3309 of 11/9/2003

Generation of the morphological model for the hydraulic modelling

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

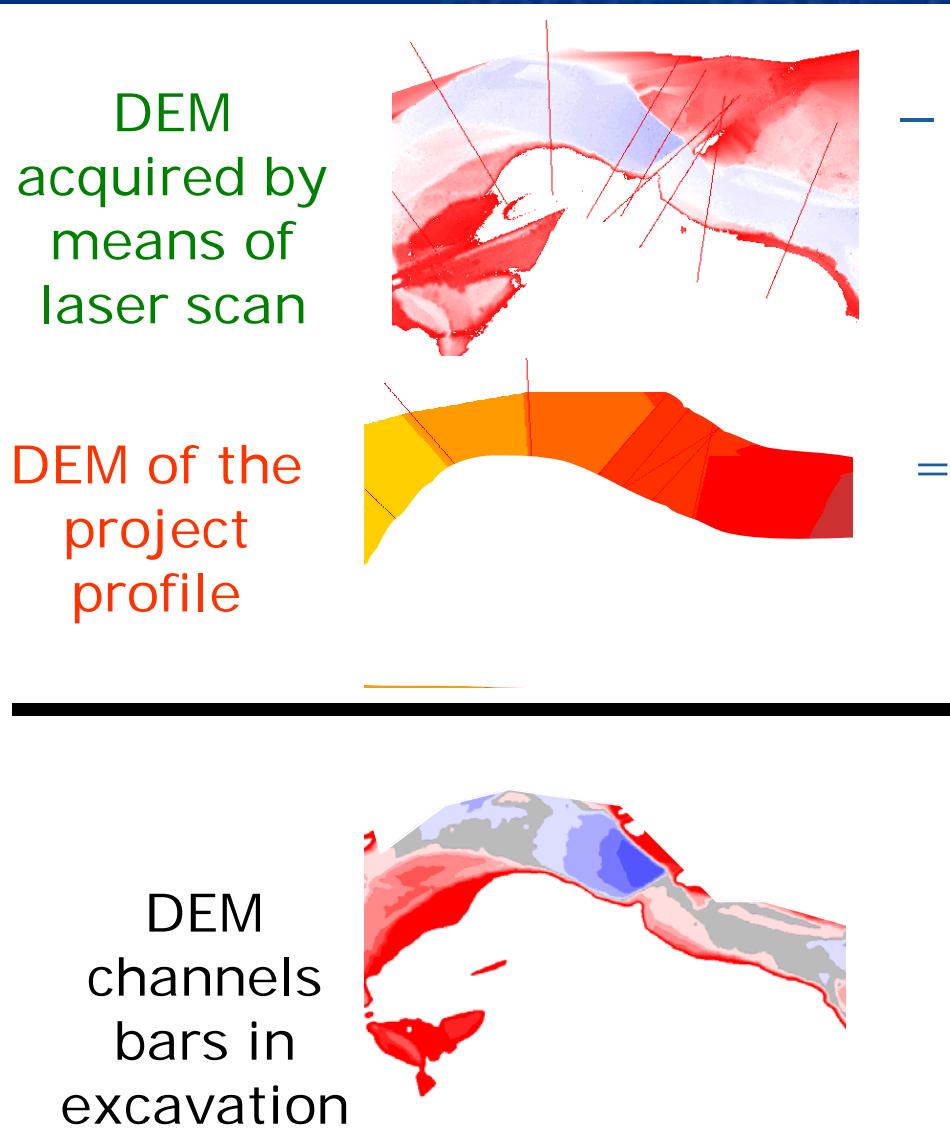

The modelling of the Fella River

- One-dimensional hydraulic numerical model in a dynamic mode by the execution of:
 - 225 hydraulic sections for a total of 42.8 km of the river bed
 - Modelling of hydraulic operation of 26 structures (bridges, weirs and dams)
 - Numerical simulation of HEC-RAS in a permanent mode
 - Calculation of the profile for full section condition

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

Generation of the 3D representation of the areas for excavation and filling

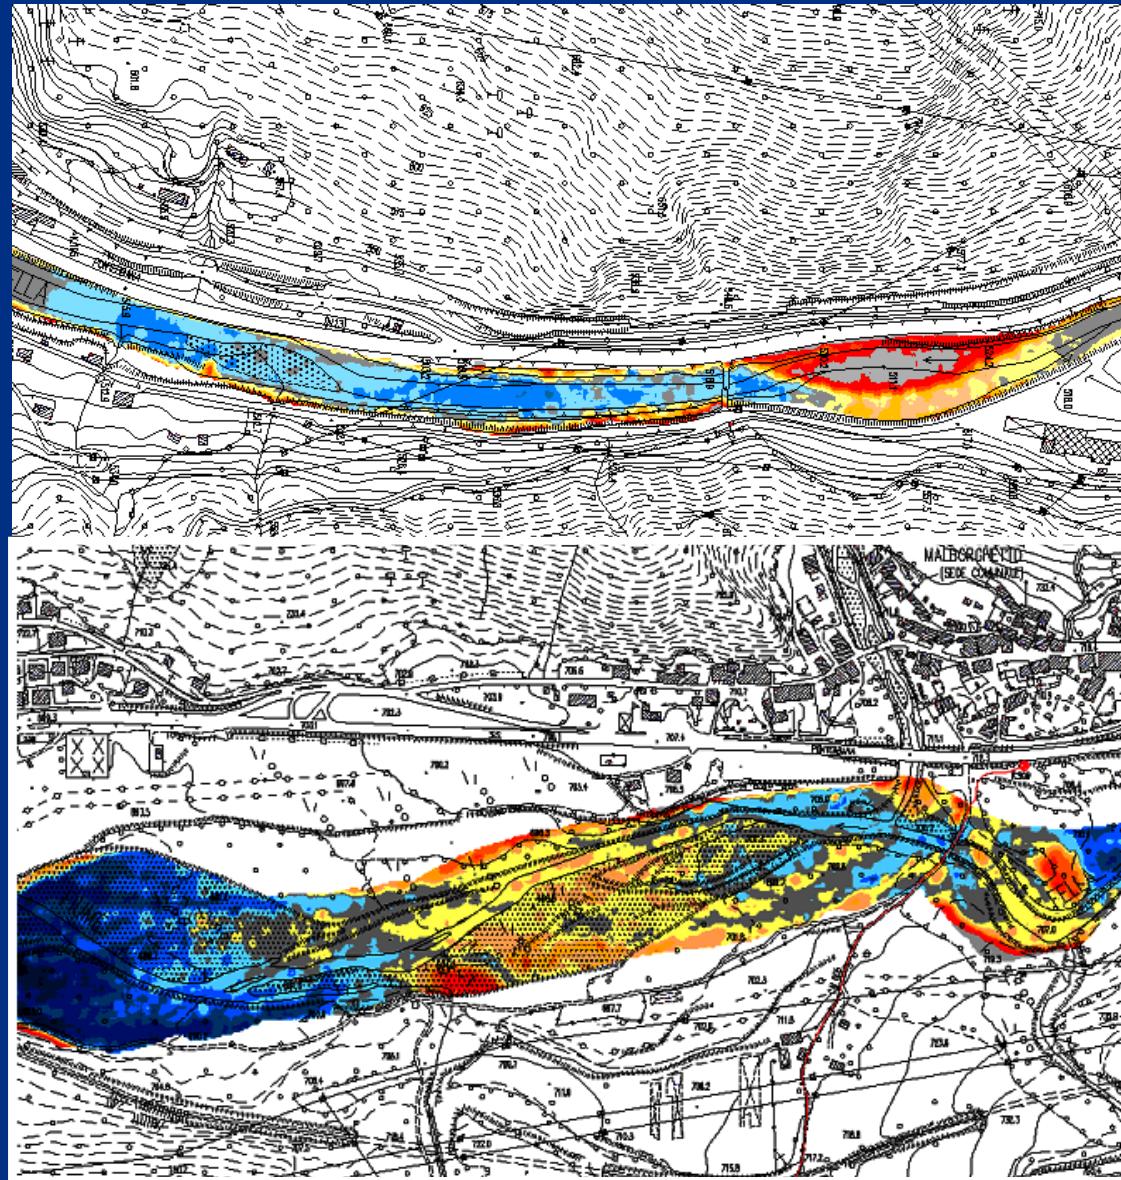

- Subtraction from the digital elevation model of the area covered with the digital laser scan model of the project profile, aiming at the digital model of excavation with the thin-meandering channels preserved

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

Examples of 3D representation of the proposed hydraulic design

the study at
Pontebba
Pitratagliata
and at
Malborghetto
Valbruna

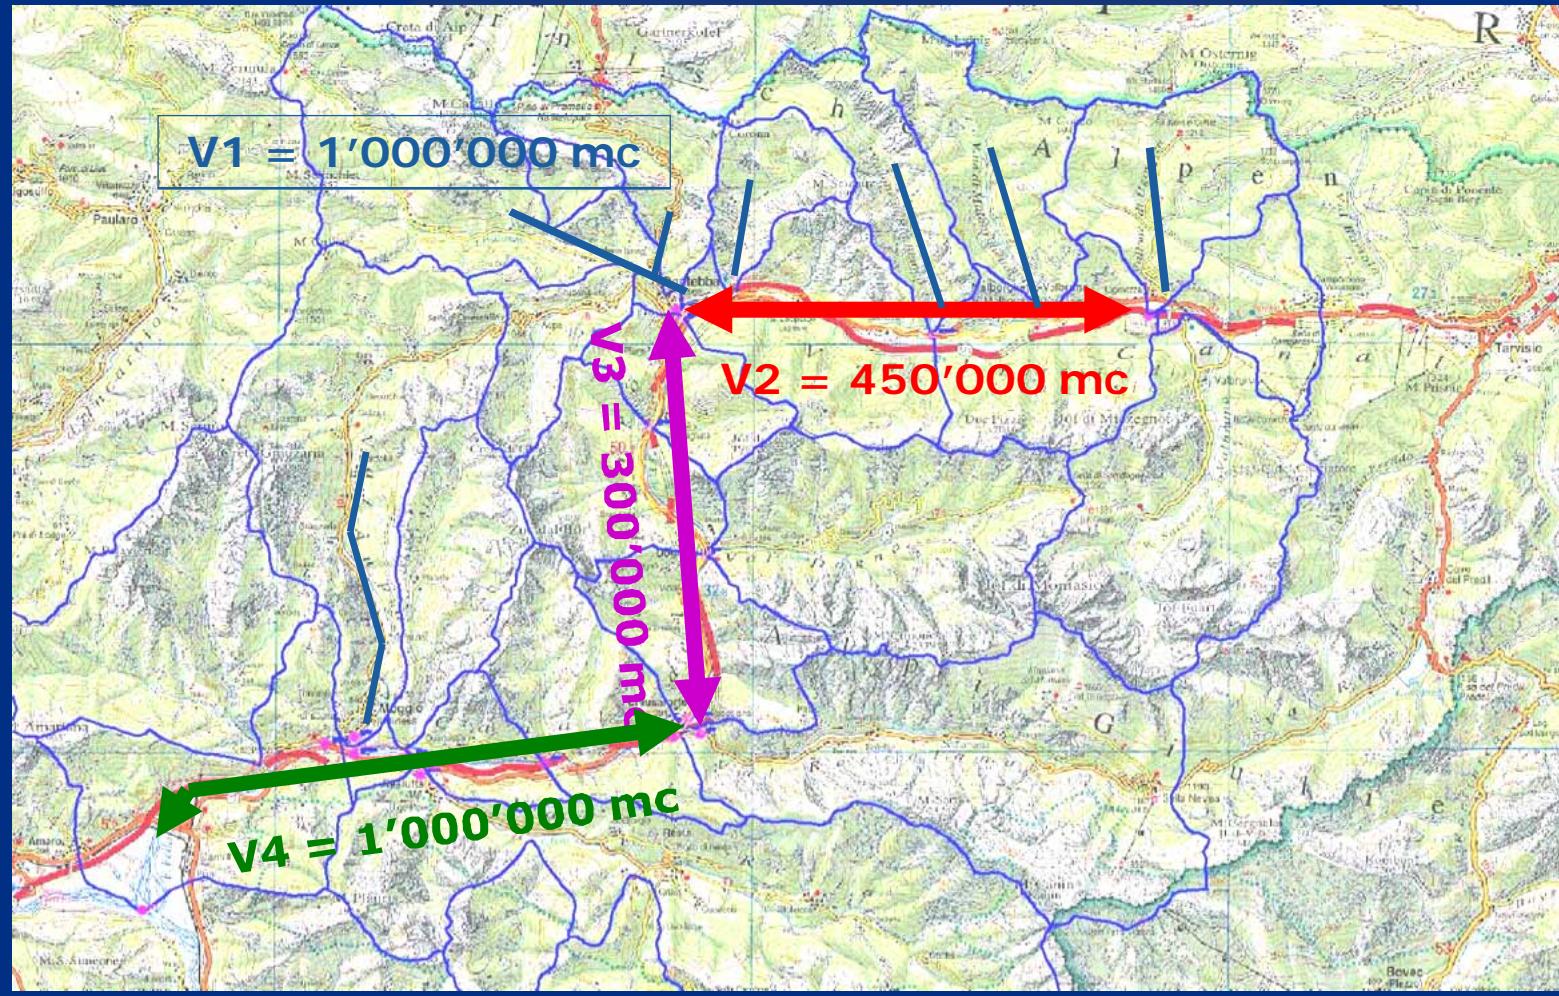

Order from the President of the Council of Ministers n°3309 del 11/9/2003

Preliminary calculation at large-scale of the excess volumes in the river bed, net volume mobilised for the reduction of the hydraulic hazard- Fella rive and affluents

Tratto	Mobilised volume(m ³)
1- Affluents of Fella up to Pontebba (rio Uque, rio Malborghetto, rio Bianco, rio Uccelli, torr. Pontebbana-Bombaso) e torr. Aupa	1'000'000
2 - From Ugovizza (forte di Malborghetto) up to Pontebba (briglia San Rocco)	450'000
3 - From Pontebba to Chiusaforte (up stream of the confluence Raccolana)	300'000
4 - From Chiusaforte to Carnia (briglia railway bridge downstream to Amaro)	1'000'000
General total	2'750'000

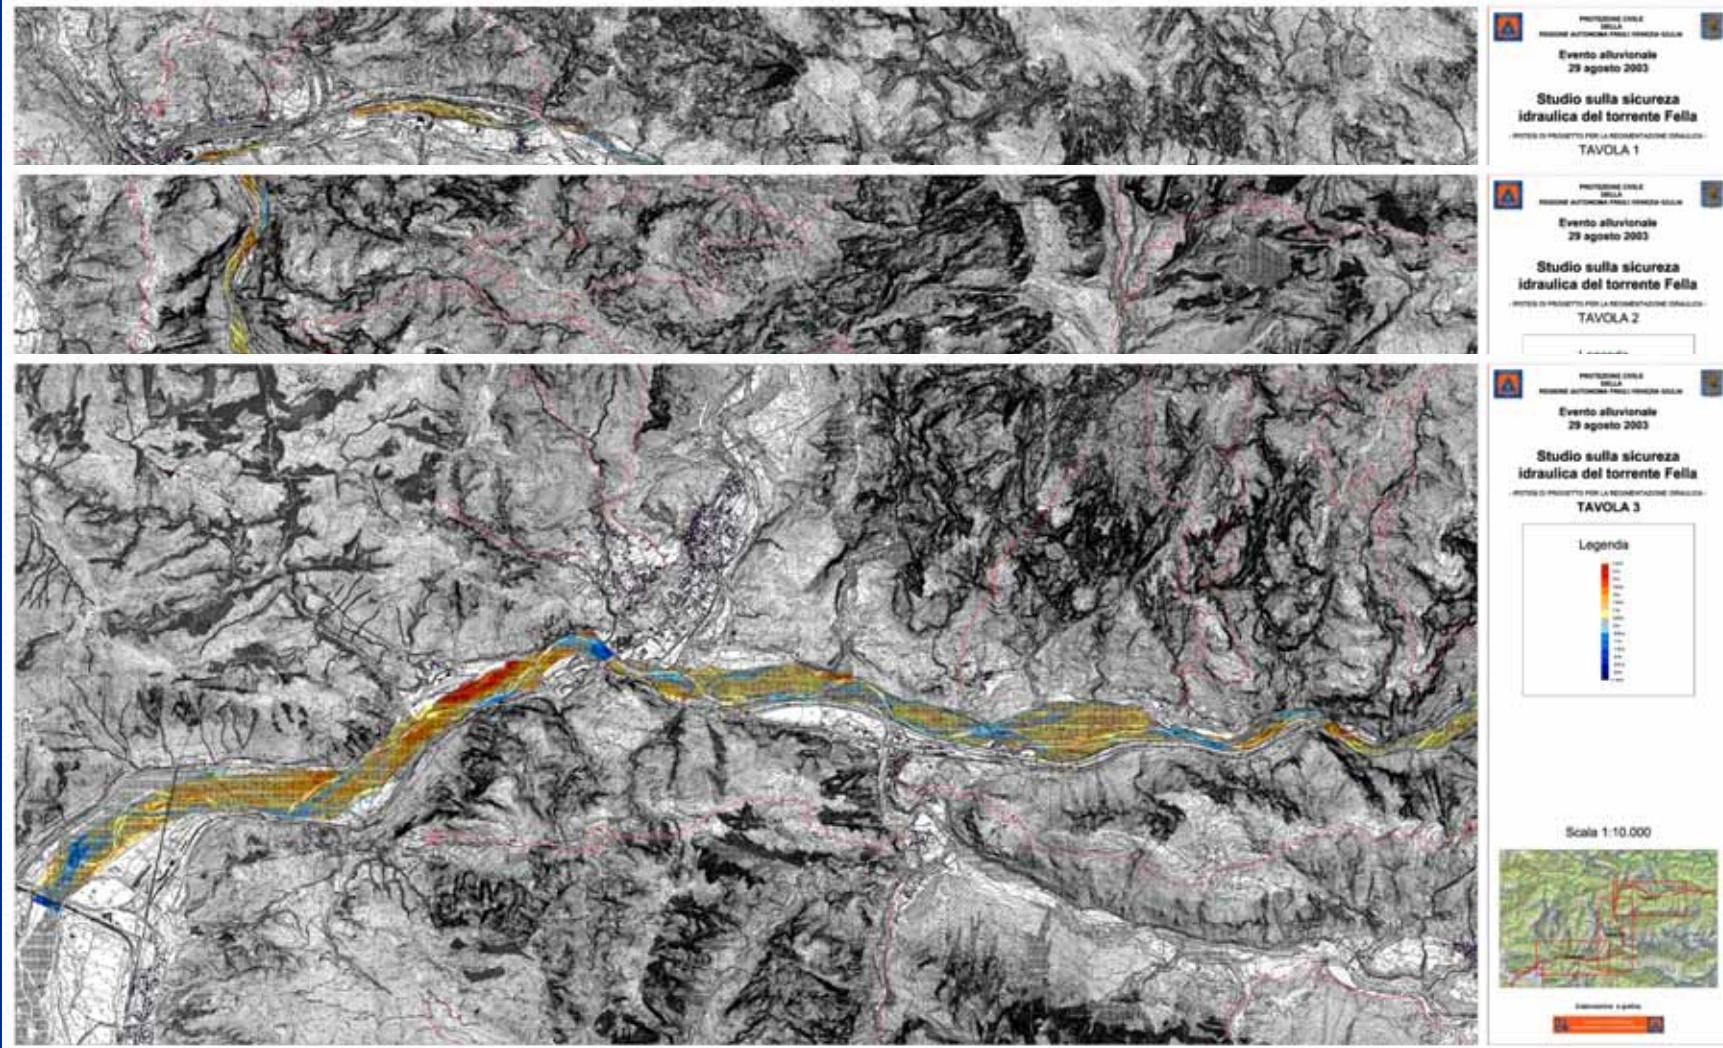

Order from the President of the Council of Ministers n°3309 del 11/9/2003

Fiume Fella – Routes in which there is a ready source of volumes in excess of the safety and proper hydraulic regime

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

- Study on the flood hazard of the Fella – piano ghiae

Ordinanza del Presidente del Consiglio dei Ministri n°3309 del 11/9/2003

Flood hazard study in the Fella river

- The study just described led to the preparation of the preliminary project for the Fella river intervention, which is aiming to the hazard reduction in the territory
- Based on the preliminary project the estimated cost requires from the administration a credit of **3.380.000 €.**
